

Op-Sym Mobile 5.1

Complete Visual Prototype - Beginner Testing Manual

This release is deliberately ****not connected to the real Op-Sym backend****.

Its only purpose is to answer one question:

****Is this the mobile application we want before we reconnect real data?****

Desktop remains completely outside this prototype and should remain frozen.

What you are testing

You are testing the visual experience for:

- Home
- Today
- Tasks
- Inbox
- Week
- Month
- Year
- Commitments
- Analytics
- More
- Settings
- Capture
- Task Detail

Every screen has a Portrait layout and a separately designed Landscape layout.

What is intentionally missing

The prototype does not save data.

The prototype does not connect to:

- Google Sheets
- Calendar
- Gmail
- Drive
- CICE
- Task Workspace
- Phone Capture backend
- Android Share backend

Buttons respond visually so you can judge the interaction pattern, but they do not perform real work.

Method 1 - Test on a computer

- Unzip the package.
- Open `index.html` in Chrome.
- Resize the browser into a narrow Portrait shape.
- Test every navigation item.
- Resize into a wide Landscape shape.
- Test the same screens again.

Method 2 - Test on your actual phone using GitHub Pages

This is the preferred method.

- Create a temporary GitHub repository, for example:

`opsym-mobile-visual-test`

- Upload all files from this package:
- index.html
- styles.css
- app.js
- opsym-logo.png
- Open repository Settings.
- Open Pages.
- Under Build and deployment choose:
- Source: Deploy from a branch
- Branch: main
- Folder: / root
- Save.
- Wait for GitHub to provide the Pages URL.
- Open that URL on your phone.
- Do ****not**** install it as the permanent Op-Sym PWA yet.
- Test Portrait first.
- Rotate to Landscape and test again.

Portrait approval checklist

Home

Confirm:

- Op-Sym branding is compact and clear;
- full tagline is readable;
- Planning Mode and Settings are visible;

- Hero title is easy to read without zoom;
- Next and Attention are obvious;
- only three "What matters now" actions are shown;
- bottom Home / Today / Capture / Tasks / More navigation is easy to reach.

Today

Confirm:

- schedule is the dominant content;
- times can be read without zoom;
- rows are easy to tap.

Tasks

Confirm:

- task title and status are readable;
- filters do not dominate the screen;
- Complete and Details are easy to tap.

Inbox

Confirm:

- source, title and captured text have clear hierarchy;
- Clarify and Schedule are secondary actions.

Week

Confirm:

- seven days are understandable at a glance;
- pressure points are obvious.

Month

Confirm:

- activity is grouped by Week 1, Week 2, Week 3 and Week 4;
- individual commitments are readable.

Year

Confirm:

- 12 months can be scanned quickly;
- current month is visually obvious.

Commitments

Confirm:

- Open Loops, Waiting, Closure and Overdue are easy to distinguish;
- individual commitments remain simple.

Analytics

Confirm:

- the page gives useful conclusions rather than dashboard clutter.

More

Confirm:

- less-used destinations are easy to find;
- ordinary navigation stays uncluttered.

Settings

Confirm:

- settings feel native and calm;
- toggles and values are large enough.

Capture

Confirm:

- text input is the primary action;
- Interpret & schedule is obvious;
- Inbox only is clearly secondary;
- Task / Event / Commitment / Paste shortcuts are reachable.

Task Detail

Confirm:

- title, progress, priority, deadline, role and location are immediately understandable;
- notes remain readable;
- actions do not overwhelm the screen.

Landscape approval checklist

Landscape should not look like Portrait stretched sideways.

Home

Confirm:

- intelligence occupies the left side;
- "What matters now" occupies the right side;
- both sides are readable simultaneously.

Working pages

Today, Tasks, Inbox, Week, Month, Year, Commitments, Analytics and Settings use:

- left = page purpose / primary action;
- right = actual working content.

Confirm:

- no duplicated Portrait page appears underneath;
- no giant blank areas;
- no content is hidden behind the bottom navigation;
- right-side content can scroll where needed.

Global readability rules

Reject the design if:

- any operational text needs zooming;
- icons look blurry or inconsistent;
- a button is difficult to hit with one thumb;
- navigation requires horizontal scrolling;
- the central Capture action is visually weak;
- the screen feels like a compressed desktop dashboard.

Approval gate

Do not connect this prototype to the real backend until you are comfortable saying:

****"Freeze Mobile 5.1 visual design."****

After that, backend integration should happen one screen at a time:

Home -> Today -> Tasks -> Capture -> Inbox -> Commitments -> Week -> Month -> Year -> Analytics -> Settings.
